Allowable Subject Matter

1. Claims 1-20 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a method for the graphics processor to store state data in a buffer residing in the graphics processor, among other things, comprising receiving and storing N sets of state data in the buffer, the buffer being non-duplicative state data buffer (claims 1, 5, 13, and 16); the buffer being a ring buffer and the available space in the buffer is the difference between the length of the buffer and the total length of the N sets of state data (claim 20).

The closest prior art, Niu et al. (US Patent No. 6,268,874) teaches a method of receiving N sets of state data from a host processor and storing state data into a buffer wherein, total length of N sets of state data does not exceed a length of the buffer, and also teach prohibiting additional set of state data from being stored in the buffer when N equals to the maximum number of allowed states.

However, the buffer as taught by reference Niu et al. is a duplicative parallel buffer, and not implemented as a ring buffer.
